

Sanding and dust have always belonged together. But not any more – thanks to Abranet, one of the most sensational abrasive products on the market. If you have a vacuum cleaner\* for your hand sanding block, you can sand virtually dust-free.

### How does it work?

It's patented, so we won't reveal too many secrets. Basically, it's an abrasive net with thousands of tiny holes. The distance from each grit to the nearest dust collection point is only half a millimeter, ensuring superb dust extraction from the entire surface of the material.

*\*) We recommend that you use an industrial vacuum cleaner. Or at least attach a filter to your regular vacuum cleaner to protect the motor from fine dust particles.*

**MIRKA**

Abranet®

Sands more. Dusts less.

Abranet® Sands more. Dusts less.

## A revolutionary innovation offers revolutionary benefits

- **Healthy work environment** – Abranet sands without dust
- **Time saver** – No dust, no cleaning
- **Saves money** – Abranet is long-lasting
- **Practical** – No covering before you get started
- **User-friendly** – Abranet is easily attached to your hand sanding block
- **Better finish** – Unique net design ensures an even surface

### What you need to get started

- Hand block and hose
- Abranet sanding sheets
- Vacuum cleaner
- That's all

### Bench tops/ Furniture

**Redoing a surface?** First sand it down with Abranet P80 to remove old stains or paint, then use Abranet P150 to prepare the surface for a coat of paint or varnish.

### Walls

#### Putting up wallpaper?

Abranet strips P80-120 give you an even surface to work on. Painting plasterboard? Start by using Abranet strips P80-120, then switch to P150 for a smooth surface.

### Doors/ Windows

#### Repainting a door or window?

Begin by scraping off most of the old paint. Depending on how many layers of paint there are, use Abranet P80-120 to sand the surface. To get it ready for painting, Abranet P150 is ideal.
